

Hyun-Tae Jin

Senior Enterprise Solutions Engineer I

hytjin@gmail.com / htae.dev

SUMMARY

Full-stack engineer who works where software meets the factory floor. Deployed and supported MES releases on a live EV battery production line, owned month-end ERP settlement and scheduled Oracle maintenance, and triaged shop-floor incidents from Linux logs and application source. Earlier work spans a clinical web portal in healthcare and agency delivery for startup clients. Built an internal ordering application that grew from 350 to 2,600+ users across 4 campuses.

EXPERIENCE

Stellix

Foxborough, MA / Remote

Senior Enterprise Solutions Engineer I

Sep 2026 - Present

StarPlus Energy

Kokomo, IN / On-site

Senior MES DevOps Engineer

Dec 2025 - Sep 2026

- Deploy and test MES releases across Mixing, Electrode, Stack, and Assembly on a live production line
- Own month-end ERP settlement and scheduled Oracle maintenance, including data purges, production corrections, and KPI reporting queries
- Third-line Systems Operations escalation after Operations Specialists and Process Innovators: controlled data corrections and MES source analysis to determine application intent
- Triage shop-floor incidents: trace Linux logs, analyze MES source and git history, document repro steps, and drive fixes with remote developers, DBAs, and IT Infrastructure
- Run Jenkins-based MES deployments; maintain disaster recovery runbooks and factory revival procedures
- Analyze MES application code (.NET 4.8 WinForms), report defects and fix suggestions to HQ developers; write Python and PowerShell scripts for data and operational automation
- Guide local engineering team on git-flow and code management standards across GitHub, GitLab, and Gitea

MES Software Engineer

Nov 2024 - Nov 2025

- Supported Stack and Assembly MES on the floor: equipment integration failures, lot tracking, and production hold workflows
- Worked with Process Innovation Managers to troubleshoot machinery and equipment issues where MES meets the production line
- Debugged UI and backend defects with remote developers; authored SQL data corrections and validated fixes under change control
- Guided local software engineering practices and code management for the plant engineering team

UI / UX Software Engineer

Jan 2024 - Oct 2024

- Developed MES operator UI components on platform release cycles with distributed engineering teams
- Built an internal Vite + React meal-ordering application from scratch; scaled from 350 to 2,600+ users across 4 campuses
- Partnered with General Affairs and food vendors as stakeholders while expanding Korean and American menu support

3FGolf

Remote / Remote

Freelance Web Developer

Oct 2023 - Present

- Ship fantasy golf and LLM-powered apps with React, Vite, TailwindCSS, react-query, and Supabase
- Integrate third-party sports and news APIs; optimize bundle size, caching, and SEO for production traffic

Co.Lab

Seattle, WA / Remote

Software Engineer

Sep 2023 - Nov 2023

- Built Matrimoni wedding-planning app in an 8-week sprint
- Owned git workflow, app architecture, and the Trello project board
- Worked with a co-developer and designer across time zones to hit project deadlines

Coding Temple

Chicago, IL / Remote

Full Stack Developer Trainee

Apr 2023 - Jun 2023

- Bootcamp focus on Python, Flask, React, TypeScript, JavaScript, HTML/CSS, and SQL
- Built full-stack applications with custom REST endpoints and JWT authentication
- Oversaw repositories for group projects, including merge and rebase across codebases

Career Break

Incheon, South Korea

Sabbatical / COVID / Family and Personal Reasons

2020 - 2023

Highmark Health Solutions

Pittsburgh, PA / Hybrid

Application Developer

Mar 2019 - May 2020

- Lead developer on a clinical web portal for patient data search; mentored a developer on Vue with a Java backend
- Collaborated within a Scrum team, managed story points for sprints, and maintained GitLab git-flow
- Configured Babel for IE7 compatibility and championed Vue adoption within the company
- Maintained and developed Highmark's Utilization Management tooling on the PegaSystems platform

Checkmate Digital

New Haven, CT / Remote

Web Developer

Sep 2017 - Jan 2019

- Delivered end-to-end web applications for startup clients in an agency environment
- Led Angular-to-React migration with the CTO; established component patterns and build tooling for the new stack
- Worked across the product lifecycle from concept through deployment under client deadlines

SKILLS

Languages: JavaScript, TypeScript, Python, Java, C#/.NET, SQL, HTML5, CSS3, PHP, Ruby

Libraries / Frameworks: React, Vite, Next, Redux, Vue, Nuxt, Vuex, Angular, .NET, TailwindCSS, Bootstrap, Material UI, Vuetify, Node, Express, Flask, React Query, REST APIs

Databases: Oracle, PostgreSQL, MySQL, MongoDB, Firebase, Supabase, SQL Developer

Tools / Systems: Jenkins, AWS, Visual Studio, VS Code, Cursor, PowerShell, Postman, Insomnia, Jira, Linux log analysis, ERP interfaces, disaster recovery

Version Control: Git, GitHub, GitLab, Gitea, Bitbucket

Deployment: Jenkins, Vercel, Netlify, Render, Firebase, Glitch

Discipline: Agile, Scrum, Code Reviews, Merge Conflicts, Change Control, Requirements Gathering, Plant-side MES support, UI/UX, Functional/OOP

EDUCATION

University of Pittsburgh

Pittsburgh, PA

B.S. in Computer/Information Science, Concentration in Networks and Security
